-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Azuma (6,573,017) in view of Akasaki (4,933,245). Azuma teaches the specific combination of a polyallylate binder resin (col. 19) and a hole transferring material (col. 9) used as an electrophotosensitive material. Although Azuma teaches the same hole transferring material, only a similar binder is taught (resin 5). Akasaki (col. 25) teaches the inventive polyallylate and the equivalence of binder resins used in similar electrophotosensitive applications. It would have been obvious to one of ordinary skill in the art to use the binder resin of Akasaki with any desired substitutions in the electrophotosensitive material taught by Azuma with the expectation of similar results such as durability because of the direct teachings of Azuma and Akasaki to the improved physical properties of similar electrophotosensitive materials used in similar applications due to the combination of binder and hole transferring materials (Azuma col. 5-6 and Akasaki col. 2 lines 1-15).
